

Hands-on task

React Native Mobile App

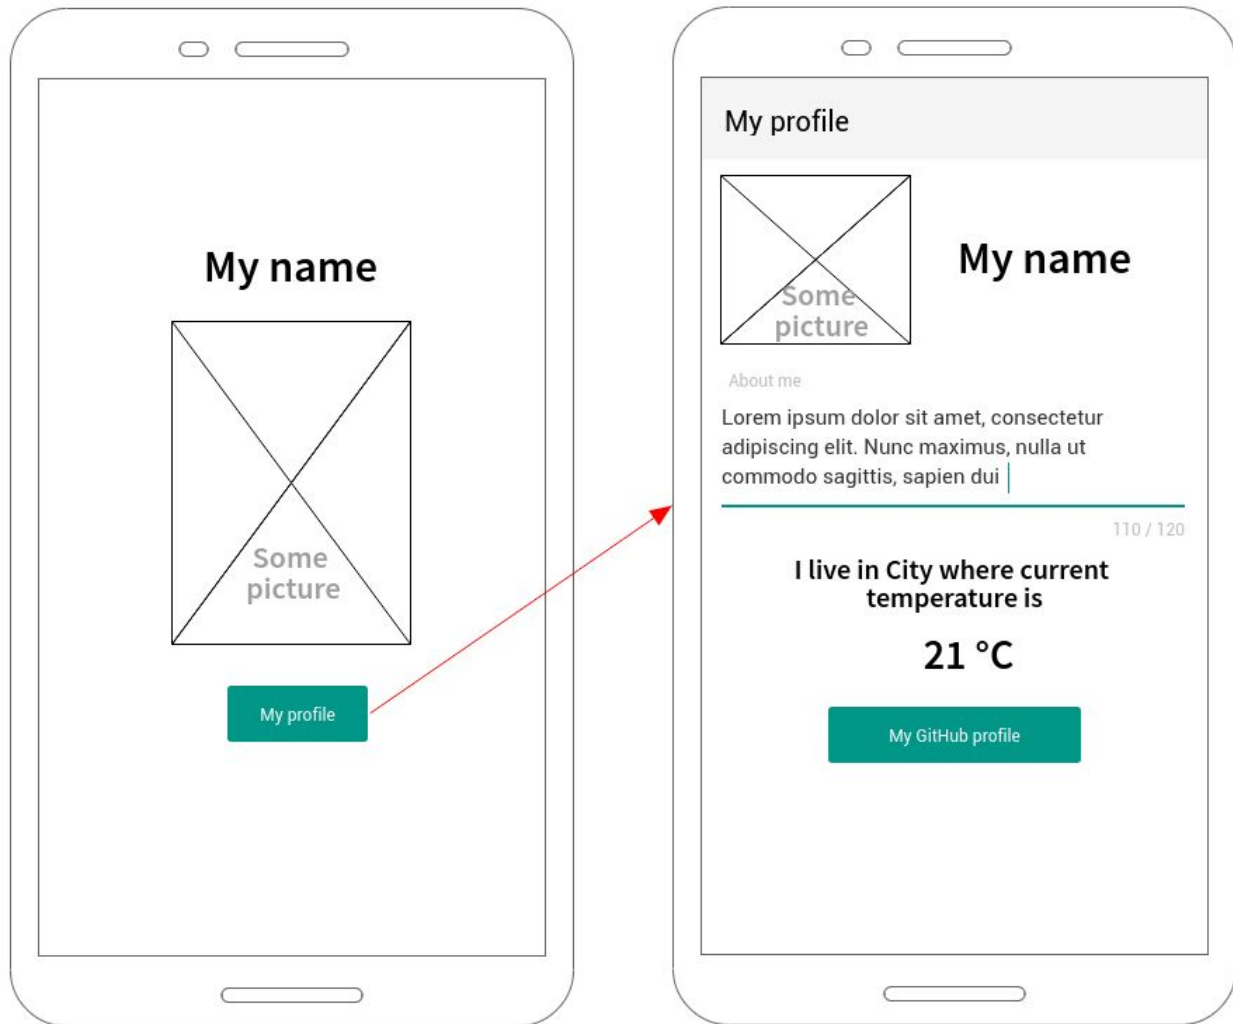

React Native is a popular way (has tens of thousands stars in GitHub repo) to develop multi platform native mobile apps.

Please follow the instructions to setup React Native project on your PC (and smartphone if any):
<https://facebook.github.io/react-native/docs/getting-started.html>

Assuming you started your app on your PC (using emulator) or on your smartphone and see the following screen:

Modify React Native app code to achieve wireframe:

Make sure your app:

- Use flex layout for app to look great on multiple screen sizes
- Changes in “About me” field are automatically saved and displayed next time app is opened
- Use Weather API to display current temperature in the city you live:
<https://www.metaweather.com/api/>
- When clicked on “My GitHub profile” button the app is redirected to GitHub profile where the app code is available
